DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 17-20 and 24-27 provide for the use of tap coefficients, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 14-16 and 21-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Yatrou et al. (United States Patent 5,343,522), hereinafter referenced as Yatrou.

Regarding claim 1, Yatrou discloses an adaptive sparse echo canceller using a sub-rate filter for active tap selection. In addition, Yatrou discloses a method for processing filter tap coefficients, comprising: adapting high-energy filter tap coefficients and low-energy filter tap coefficients when a first predetermined condition occurs; and separately adapting the high-energy filter tap coefficients from the low-energy filter tap

coefficients when a second predetermined condition occurs, as disclosed at column 3, line 12 through column 5, line 40 and exhibited in figures 1-3.

Regarding claim 15, Yatrou discloses everything claimed as applied above (see claim 14), in addition Yatrou discloses wherein separately adapting the high-energy filter tap coefficients from the low-energy filter tap coefficients comprises adapting the high-energy filter tap coefficients with a first gain constant and adapting the low-energy filter tap coefficients with a second gain constant, as disclosed at column 3, line 12 through column 5, line 40 and exhibited in figures 1-3.

Regarding claim 16 Yatrou discloses everything claimed as applied above (see claim 15, in addition Yatrou discloses wherein the first gain constant is greater than the second gain constant, as disclosed at column 3, line 12 through column 5, line 40 and exhibited in figures 1-3.

Regarding claim 28 Yatrou discloses a method for searching for filter taps for adaptation, comprising: searching for a first group of filter taps associated with a first energy level; biasing a group of filter taps adjacent to the first group; and searching for a second group of filter taps associated with a second energy level, as disclosed at column 3, line 12 through column 5, line 40 and exhibited in figures 1-3.

Regarding claims 21-23, Yatrou discloses everything claimed as applied above, in addition claims 21-23 are interpreted and thus rejected for the reasons set forth above in the rejection of claims 1-3.

Allowable Subject Matter

Claims 29-33 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
